NISHANT SUMAN

B.Tech (Information Technology) Student

Indore, Madhya Pradesh, India | 6264616690 | nishant.suman1410@gmail.com | github.com/NiShanT-sUmAn14 | linkedin.com/in/nishant-suman-33b79b357

OBJECTIVE

Motivated third-year Information Technology undergraduate with a strong foundation in Java, Data Structures & Algorithms, Object-Oriented Programming, and Database Management Systems, combined with practical exposure to frontend development, version control workflows, and applied AI concepts. Seeking a Software Development / Backend / Data Science internship where I can apply my problem-solving ability and project experience to contribute to real engineering work while continuing to grow as a full-stack developer.

EDUCATION

Shri Govindram Seksaria Institute of Technology and Science (SGSITS), Indore *Expected Graduation: 2028*
B.Tech in Information Technology — Currently in 3rd Year

Kendriya Vidyalaya No. 1, Gwalior
Class XII (CBSE) — 70.8%
Class X (CBSE) — 71.2%

TECHNICAL SKILLS

- Programming Languages: Java (primary — OOP, DSA), working knowledge of Python
- Core Computer Science: Data Structures & Algorithms (arrays, recursion, backtracking, trees, complexity analysis), Object-Oriented Programming (encapsulation, inheritance, polymorphism, abstraction), Database Management Systems (DBMS)
- Web Development: HTML (semantic structure), CSS (box model, selectors, positioning, layout systems), JavaScript fundamentals; actively building backend development skills
- Computer Networks & Systems: IP addressing, DNS hierarchy, browser rendering engines, core networking concepts
- Version Control: Git (staging, committing, branching, merging, stashing, tagging, rebasing, conflict resolution) and GitHub (SSH setup, repository management)
- Tools & Platforms: VS Code (with GitLens), Git Bash, LeetCode

PROJECTS

Sudoku Solver *Java*
- Designed and implemented a Sudoku-solving engine in Java using a backtracking algorithm to explore valid number placements across rows, columns, and sub-grids.
- Applied core DSA concepts — recursion, constraint checking, and state backtracking — to efficiently prune invalid board configurations.
- Focused on clean, modular method design to separate board validation logic from the solving logic.

Tic-Tac-Toe Game *Java*
- Built a two-player console-based Tic-Tac-Toe game in Java, structuring the game around OOP principles (classes for board, player, and game-state management).
- Implemented win/draw detection logic and turn-based state management to handle game flow end-to-end.

RAG-Based AI Teaching Assistant *Portfolio Project*
- Built an AI assistant using a Retrieval-Augmented Generation (RAG) approach, designed to retrieve relevant study material and generate contextual answers to student questions.

- Explored how combining a retrieval step with a generative model improves answer relevance compared to a purely generative approach.
- Used as a portfolio piece to demonstrate applied interest in AI/ML concepts alongside core software development skills.

Natural Language to App Compiler *AI-Focused Hackathon Project*

- Built and deployed a working prototype to Netlify as part of an AI-focused hackathon, translating natural language input into structured application logic.
- Prepared a complete hackathon submission package — including a full GitHub repository and a video walkthrough script — to clearly communicate the project's approach and functionality to judges.

gittow *Personal Project / Git Practice Sandbox*

- Created a dedicated sandbox project to deliberately practice real-world Git workflows: staging, committing, branching, merging, stashing, tagging, and rebasing.
- Used the project to work through merge conflict resolution scenarios and to set up SSH-based authentication with GitHub.

ACHIEVEMENTS

- Solved 100+ problems on LeetCode, building strong proficiency in Data Structures & Algorithms problem-solving using Java.

ADDITIONAL INFORMATION

- Actively expanding skills across the full stack — comfortable with frontend fundamentals and continuously building backend development capability.
- Maintains an active GitHub profile showcasing project work and version-control practice.
- Regularly documents learning progress, projects, and technical concepts on LinkedIn.
- Has explored structured career roadmaps for Java development, full-stack development, AI engineering, and data science to guide ongoing skill-building.
